Final Project Evaluation Guidelines

Before the evaluation, ensure that the following are available:

Application

- Working application
- Required dependencies/configuration
- Database
- API/backend, if applicable
- Required services

Source Code

- GitHub repository
- Latest code pushed to the repository
- All important changes committed

Database

- Database should be accessible
- Required tables/entities should be available
- Sample data should be available where necessary

Demonstration

- Know exactly which features you will demonstrate
- Ensure the application starts successfully
- Test the workflow before the evaluation
- Ensure all team members know their own contribution

Important Instructions for Students

1. No PowerPoint Presentation Required

For the **Project Evaluation, there is NO requirement to create or prepare a PowerPoint presentation**. You **do not need to prepare slides**.

The evaluation will focus on your **actual project implementation, demonstration, technical understanding, and individual contribution**.

Working Application + Source Code + Technical Discussion + Individual Viva

Students should be prepared to **run and demonstrate the working application directly** during the evaluation.

2. Evaluation Duration

Each project group will be allocated approximately **15–20 minutes** for the evaluation.

Please ensure that your project is ready before your allotted evaluation time.

The evaluation will follow a structured format so that all groups can be evaluated within the available schedule.

Evaluation Structure

Activity	Approx. Time	What is Expected
Team Introduction & Project Objective	2 minutes	Briefly introduce the team, project name and purpose of the application.
Working Application Demonstration	5 minutes	Demonstrate the important features of your completed application.
Group Technical Questions	Remaining time	Questions regarding architecture, design, database, APIs, technologies and implementation decisions.
Individual Viva Questions	Remaining time	Each team member may be asked questions related to their individual contribution and overall project understanding.

3. Team Introduction – 2 Minutes

The team should briefly introduce:

- Project name
- Team members
- Main objective of the project
- Problem being solved
- Major functionality implemented

Keep this section brief. There is no need for a detailed presentation.

4. Working Application Demonstration – 5 Minutes

The team will demonstrate the **actual working application**.

Focus on the most important functionality rather than attempting to demonstrate every screen.

Important

- The team should **practice the demonstration beforehand**.
- Do not spend the five minutes trying to find files, start services, resolve configuration issues or decide what to demonstrate.

5. Group Technical Questions

After the application demonstration, technical questions will be asked to the **group**.

Questions may relate to:

- **Project Architecture**
- **Backend / API**
- **Database**
- **Security**
- **Development**

6. Individual Viva Questions

Each team member may be asked individual questions during the evaluation.

The purpose is to verify that every student:

- understands the project
- understands the work performed by the team
- understands their own contribution
- can explain the code they have worked on
- understands the technical knowledge on C#, Database, EF Core and ASP.NET CORE

Important

- Do not assume that being part of a group means that only the group as a whole will be evaluated.
- Individual understanding and contribution are also important.

Final Preparation Checklist

Before your scheduled evaluation, confirm:

- ✓ The application runs successfully.
- ✓ The major functionality is working.
- ✓ The database is accessible.
- ✓ APIs/services are running, if applicable.
- ✓ The latest source code is available in GitHub.
- ✓ The team has identified the features to demonstrate.
- ✓ The demonstration has been tested beforehand.
- ✓ Each team member knows their individual contribution.
- ✓ Each team member can explain the work they have performed.
- ✓ No PowerPoint presentation is required.

Final Note

The evaluation is not a PowerPoint presentation. It is a demonstration and technical evaluation of your actual project.

Please use the allocated **15–20 minutes effectively**. Keep the introduction brief, demonstrate the working application clearly, and be prepared to answer both **group-level technical questions and individual viva questions**.
